DETAILED ACTION

Applicant's amendment dated 09/28/2005 has been received and entered. By the amendment, claims 27-34 are remain pending in the application.

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 27-29 and 33-34 stand rejected under 35 U.S.C 102(e) as being anticipated by Yamazaki et al., US Patent No. 6,147,667.

The above claims are anticipated by Yamazaki et al. figures 1 and 6A-6B which discloses a system on panel typed liquid crystal display (LCD) device (semiconductor device) comprising:

- . a first glass substrate (101/631);
- . a pixel array (pixel matrix circuit 102);
- . a driver circuit (103/104);
- . a controller unit (logic circuit 105);
- . a second substrate (654);
- . a liquid crystal layer (656).

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Art Unit: 2871

4. Claims 30-32 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al., US Patent No. 6,147,667.

Regarding claims 30-32, Yamazaki et al. discloses the claimed invention except for a based material for an active layer being polycrystalline silicon or an amorphous silicon. It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ such polycrystalline silicon or an amorphous instead of crystalline silicon for an active layer in the thin film transistor, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use in a thin-film circuit.

Response to Arguments

5. Applicant's arguments filed 09/28/2005 have been fully considered but they are not persuasive.

Applicant's argument is that Yamazaki does not teach the substrate being a "glass substrate including at least first, second and third regions", Yamazaki teaches away from using a glass substrate and only teaches and suggests a quartz substrate (amendment, pages 4-5). The examiner is not convinced by this argument since the same is true of the Yamazaki et al. substrate. In particular, Yamazaki et al do disclose a substrate can be made by an inexpensive glass substrate (see col. 27, ln 19). In other words, the Yamazaki et al. substrate can be a glass and having at least three regions as stated above.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
